

In the Specification

Please replace the paragraphs identified below as follows.

At page 16 line 26:

--

~~identification~~ Identification device 160 components, circuitry, structures, materials, and techniques for manufacture may be of any conventional type including the type described in the above referenced US patent 09/372,274, suitably adapted for performing the functions described herein.

--

At page 17 line 6:

--

~~identification~~ Identification device 160 provides redundant element diversity by including more than one transmit channel. In an alternate implementation having several antennas coupled to one transmitter 508 (antenna element diversity), directional diversity and polarization diversity may be facilitated as discussed above and transmitter 512 may be omitted. In yet another implementation of element diversity, a common antenna (e.g., 510) is coupled to several transmitters (e.g., 508 and 512) and other antennas (e.g., 514) may be omitted.
